

## Clinic Visit Note: Amoxicillin Challenge

*Patient Name* presents to our clinic for amoxicillin drug challenge

### Review of Systems:

Negative for recent fever, rhinorrhea, rash, cough, wheezing, vomiting, diarrhea.

### Baseline Vital Signs:

### Challenge procedure details:

- total single dose for patient age: 250 mg\*\*\*
- challenge administered in a graded, 2-dose protocol as follows:
  - 50\*\*\*mg- given at \*\*\*. Patient tolerated well. No immediate reactions noted.
  - 200\*\*\*mg- given at \*\*\*. Patient tolerated well. No immediate reactions noted.
  - End of challenge \*\*\*- assessment performed, no signs or symptoms of an immediate reaction

Emergency medications readily available and physician directly available in office throughout the duration of challenge for treatment of allergic reaction.

### Assessment/Plan:

History of adverse reaction to penicillin, subsequent encounter

#### #Negative Challenge

- The patient tolerated amoxicillin challenge today without immediate reaction. >61 minutes was spent performing the amoxicillin challenge. We will remove \*\*\* allergy from the patient's chart.
- Although very low on the risk, there's a possibility of delayed reactions, including itchy rash. If this arises, recommend family administer oral antihistamine and contact our office.

OR

#### #Positive Challenge

- The patient was unable to tolerate the amoxicillin challenge today and reacted after \*\*\* dose. The patient was treated with \*\*\* and observed in our clinic setting for \*\*\* minutes. There were no further symptoms noted and the family and patient were instructed to continue avoidance of \*\*\*. Will refer to allergy for further evaluation.
