School-based A Management PROgram™

National Association of School Nurses

- Undergraduate nurse-Led Asthma Action Plans (AAP) are commonly used in schools, offering a comprehensive approach to asthma management.
- AAPs are often implemented by primary care providers (PCPs) to ensure coordinated care.
- Inpatient visits are less frequent but crucial for addressing acute symptoms.
- Education and support services are integral to managing asthma effectively.

Developed in collaboration with the National Association of School Nurses (NASN), this program aims to enhance asthma management in schools.
