The typical patterns of children's health care use are not very different between children with and without asthma.

Pediatrics; 132: 796-804.

Many studies of surgical and diet-induced weight loss have shown significant effects on asthma control.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

Using weight loss therapy, there is evidence that asthma control can be improved in those with asthma.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.

The attributable fraction for childhood asthma is 33% of adults who had an asthma attack or hospitalization in the previous year.
